IN NO CASE SHALL MIVA CORPORATION'S LIABILITY EXCEED THE PRICE THAT LICENSEE PAID FOR MERCHANT.

Miva Merchant 2.22

Release Note

Note: Miva Merchant 2.22 requires the Miva Engine 3.7001 or higher to be installed and running.

Miva Merchant 2.22, released September 6, 2000, adds the following functionality:

I. German Translation

Miva Merchant 2.22 is available in a German language version. Because Miva Merchant now supports German merchants, we have added the following payment and tax modules:

A. German Payment Processing

The following payment methods have been added to the German version of Miva Merchant 2.22.

BANKEINZUG - Electronic funds transfer where the customer needs to supply four values:

1. Kontoinhaber (account owner if different from buyer)
2. Kontonummer (account number)
3. Bankleitzahl (bank-code)
4. Bank (bank name)

VORAUSKASSE - The customer prints out an order form and mails it to the merchant along with payment.

NACHNAHMEN - This is a COD method of payment.

ÜBERWEISUNG - The customer receives the printed invoice with the ordered products, then submits payment electronically.

German version of CyberCash 2.1.2de.

B. German VAT Module

Provides calculation of the German Value Added Tax.

German VAT has multiple categories of products. Each category is assigned a rate, which may change from time

to time. Shipping is taxed at the rate at which the highest dollar amount of products is taxed.

There is a checkbox that allows the merchant to indicate that their product prices already have VAT applied. If checked, VAT (on products) are reverse-calculated and displayed, but not included in the total.

II. Payflow Link

The newly released VeriSign Payflow Link has been added to the Miva Merchant payment processing options.

III. Customer Logout

In the "Account" information screen, customers will now be able to click on a button to log out.

IV. CyberCash

The CyberCash module ensures that order has a unique order number during authorization.

V. Invoice Changes

The date and time the order was taken has been added to the invoice.

VI. Sales Tax Calculation

Shipping charges can now be optionally calculated before tax. Therefore tax may now be charged to shipping charges.

VII. Support for Updated UPS Protocol

The UPS Shipping Module has be modified to support version 1.2 of the UPS protocol. UPS will no longer support version 1.1 as of Sept. 30, 2000. The new shipping module requires the UPSRSS commerce library which is distributed with Miva Engine 3.72.
